

# B.S. IN PURE PHYSICS

## Overview

The pure physics major is recommended for students intending to enter graduate school in Physics, or that want a deeper understanding of fundamental physics.

It consists of one of the University Physics sequences with two labs, plus PHY 306 (lab), PHY 321, PHY 340, PHY 350, PHY 351, PHY 360, PHY 362, PHY 506 (lab), PHY 540, and PHY 560.

Students interested in a Ph.D. program in physics are strongly encouraged to also take PHY 561.

To satisfy the College of Arts and Sciences writing requirement in the discipline, students majoring in Pure Physics are required to pass at least one writing intensive course within the Physics Department. These are PHY 306, PHY 362, and PHY 506. The requirement can also be fulfilled by passing WRS 233 with a grade of C- or higher.

## Mission

The mission of the Physics B.S. program is to provide students with a rigorous grounding in classical and modern theory, experience in advanced experimental techniques, and exposure to a broad spectrum of topics in physics research.

## Goals

It is expected that graduates will be capable problem solvers, proficient critical and scientific thinkers, and possess backgrounds that prepare them for success in graduate school or their desired career path. Graduates will also be able to communicate their scientific ideas in written form to both scientifically literate and general audiences.

## Student Learning Outcomes

- Students will demonstrate the ability to solve problems in classical and modern physics and proficiency in theoretical and applied mathematics, making them competitive in their application at top graduate programs and/or in the job market.
- Students will be exposed to and engaged in forefront physics research. Students will learn first hand how research is performed in one of our labs, while contributing to one of our active research programs.
- Students will be able to report their work/ideas in written form to both the scientific community and a broader audience.
